

Our most
advanced
zappi yet

Same look, **endless** new opportunities

Today we're announcing some huge leaps forward for our zappi product line up, in our mission to decarbonise the world.

A lot has changed since we launched the original zappi and we're thrilled to see companies big and small take on the challenge to make the world a better place.

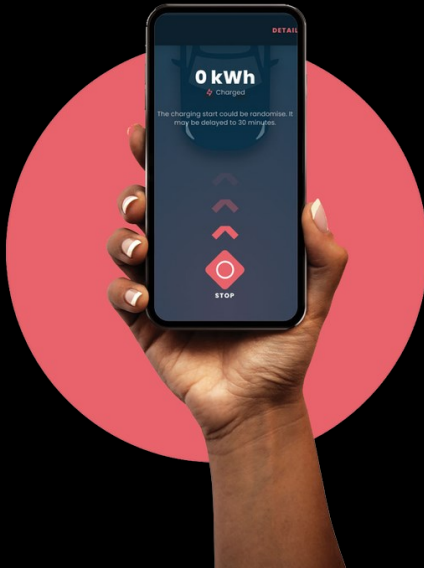

We can't do it alone, that's why today we're announcing that zappi will become OCPP 1.6J compatible. For the first time, you'll be able to pair our leading, green charging experience with charge point management platforms, payment service providers, fleet management systems and more...

But that's not all, we're also announcing myenergi ID, our new way to not only manage access to your zappi but also to personalise the way you charge.

So how do you get our most advanced zappi? If you're an existing zappi customer with built in WI-FI, it's as simple as installing the latest software update, via the myenergi app, because your zappi only gets better with time.

We can't wait to see what our customers and partners do with these new features. [#happizappi](#)

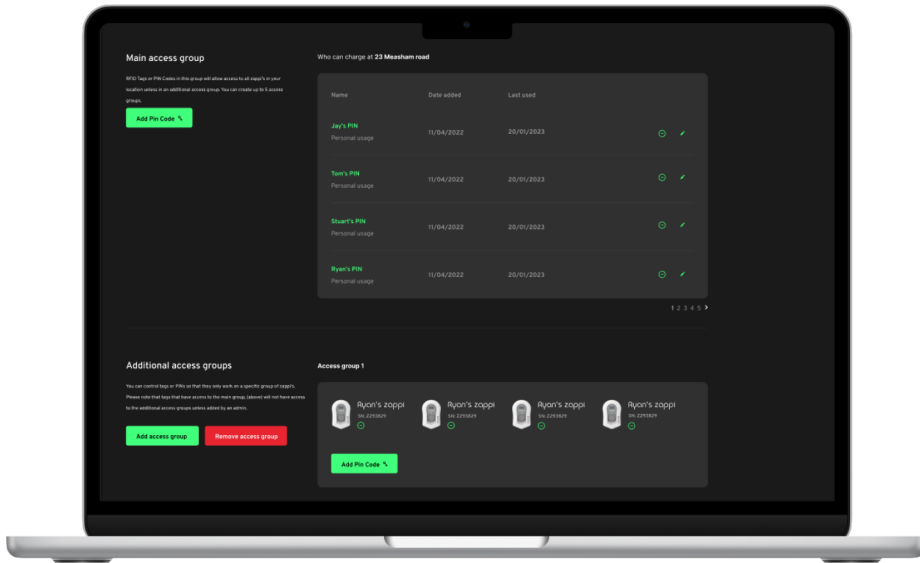

zappi has **new** **friends** with OCPP

New Opportunities

Whether you're looking to take payment for your bed and breakfast, help your employees manage their expense claims, or give your employees an app to manage access at your workplace, OCPP now allows you to pair zappi with one of our partners platforms, services or apps. This way, you can create your own bespoke charging package. If you're not sure where to start, our partners are on hand to help you get started.

OCPP without the compromise

We've designed our OCPP service so that you can still use the myenergi app and ecosystem, even if you choose to pair zappi with a third party platform. This means you still get the full benefits of the myenergi ecosystem, allowing you to maximize the energy from renewable sources with the help of eddi and libbi.

myenergi ID your key to a personalised experience

If you're not quite ready to connect to one of our partners OCPP platforms, zappi now comes with myenergi ID out of the box. With myenergi ID, you can control all zappis by grouping user profiles and zappis into access groups, allowing you to control who has access to which zappis at a location. This is great if you want to restrict access to particular user groups with a simple PIN code.

myenergi ID goes further than traditional access methods, it also allows you to personalise your experience, such as choosing which charging mode zappi defaults to when you plug in. So charging that pool car overnight, from the same charger, is now simpler than ever.

You can also tell us if you're charging for personal or business usage, and we'll keep track of this for you. We've also enhanced our reporting package, so you can get all this information at your fingertips, through your myenergi myaccount. All these features come free of charge as standard.

PIN Code management

Create up to 127 unique users, with PIN code unlock. No RFID cards required, for a simple experience.

Enhanced access control

Create up to 5 additional access groups, to control which profiles have access to which zappis

User profiles

Personalized charge profiles for zappi allowing custom charging modes and enhanced reporting

Ready to help decarbonise your fleet

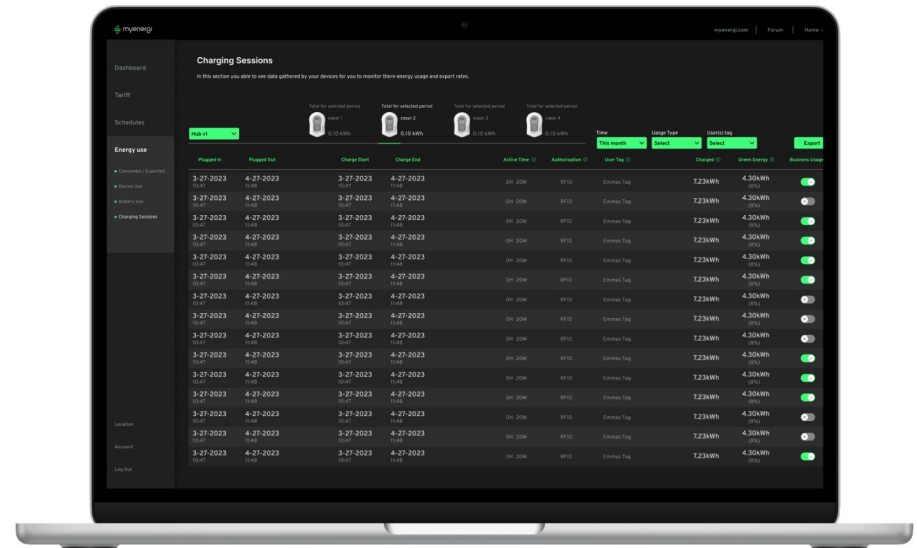

zappi is now perfect for fleets, parked at homes or workplaces, so whether your charging back-to-base fleet or grey fleet vehicles, zappi is the perfect partner to drive your business charging forward.

Thanks to myenergi ID and OCPP, zappi now allows businesses to electrify their fleets, whilst ensuring they are charging their vehicles as cheaply and greenly as possible.

Combining our market leading solar charging and off peak charging scheduler, you can ensure that your fleet charges at the most cost effective times, and when green generation is available, ensuring your fleet is as green as possible.

For smaller businesses there is myenergi ID. With myenergi ID, there are no RFID cards to buy or manage, simply issue your fleet with 5 digit PIN code for a truly low cost solution.

You can manage even more users when you pair zappi with an OCPP platform. You can even pair with your favorite OCPP compatible fleet management platform...

Enhanced reporting

See who charged, when and how much, straight from your myenergi myaccount

Business usage filter

Any business usage is automatically marked based on the PIN profile you use, it's also easy to change this retrospectively, straight from the myenergi myaccount

Filters and export

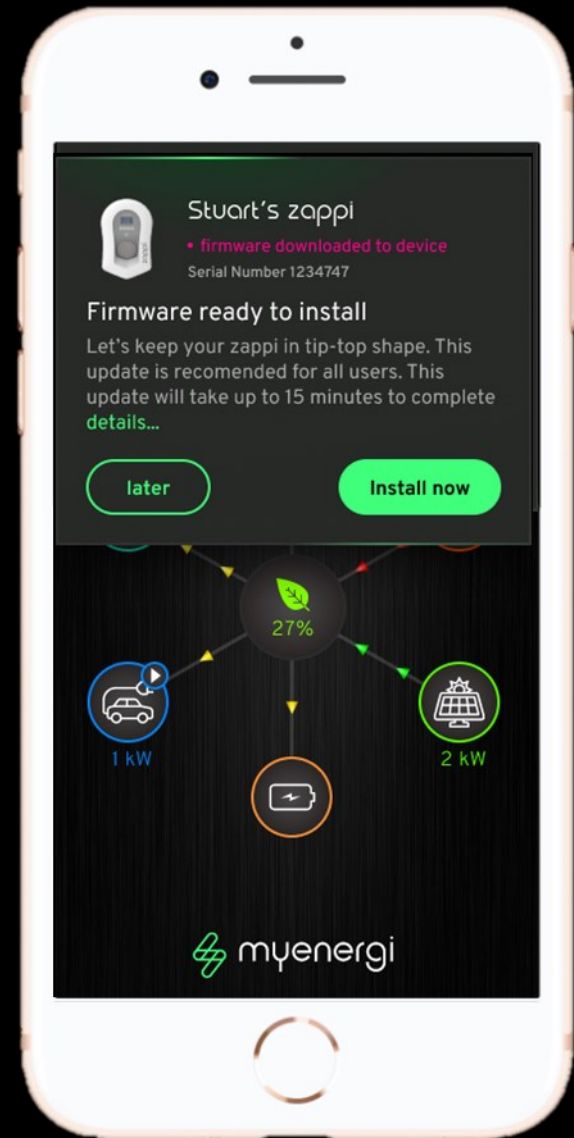

Filter by user profile, business usage, and time period. When you're ready, it's easy to export your custom report to a CSV file

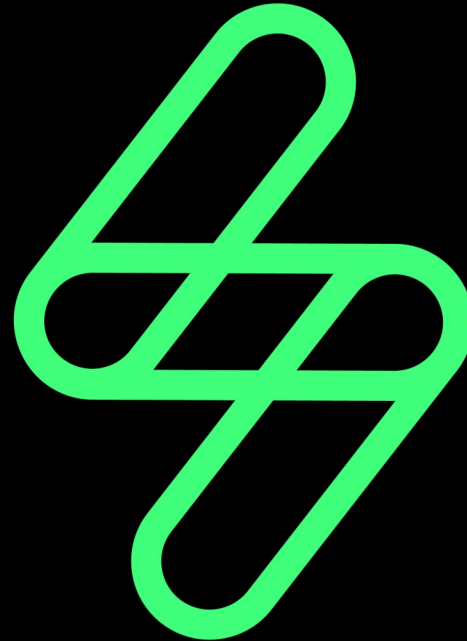

A product that keeps getting smarter

When choosing a charger, you want to make sure it is ready for what comes tomorrow. Your zappi gets smarter with time, making sure your safe, secure and ready for what comes next.

We offer all zappi customers over the air updates, and where possible, we even provide new features to existing customers too. That's why all our zappi customers with built in WI-FI are getting these new features as a simple firmware update. Simply press install in the myenergi app and we'll do the rest.

When you purchase a zappi you can be confident that it's packed full of innovations, that make it ready for the future.
